

**Workshop
on the 05.12.2005
on Phu Quoc island, S.R.Vietnam**

This workshop -in character of a conference- took place at Phu Quoc island and had been well organised by project partners of the Can Tho University. The project consortium was pleased to welcome important stakeholders and decision-makers from national, regional, district and local levels. Thus, the guests came from Hanoi, HoChiMinh-City, Kien Giang province and Phu Quoc.

All project-members provided interesting presentations according renewable energy from organic waste and biomass by biogas and biomass combustion. These lead over to discussions about the possible applicability of a renewable energy power plant on Phu Quoc island.

All participants are convinced of the advantages of such a power plant and agreed to give support for a successful and soonest implementation. The result of the RENEW-project is most welcome in all levels, especially the included feasibility study for Phu Quoc island.

During a final stakeholder-forum further steps towards a pilot plant had been previewed and pointed out by the project leader Dr. Martin Wittmaier from the *Institute for Recycling and Environmental Protection* (Bremen,Germany) and Mr. Pham QuyetChi from the *Office of the Government* as well as Mr. Le Tuan Phong from the *Ministry of Industry* (both from Hanoi, S.R.Vietnam).

In conclusion, this workshop can be seen as a crucial point according to the implementation of a power plant for the generation of renewable energy at Phu Quoc.
